

The Series A financial model template

Inside this download

The three-statement model, unit economics framework, and scenario builder we use with SaaS founders preparing a priced round — with worksheet tabs for cohort retention, sales efficiency, and sensitivity tables.

The full printable edition is being finalised for typography parity with the web version. This PDF is a branded placeholder so routes, analytics, and legal review can proceed in parallel. Re-download after the publish date shown on veltris.info/playbooks — the file name stays the same.
